

Duels

BattleArena comes pre-installed with a duels module that lets you duel other players in an arena.

Configuring the Module

This module can be enabled by adding **duels** to the **modules** section of your Arena Configuration. No other configuration is required from this point, and once BattleArena has been reloaded with **/battlearena reload** command, players will be able to use the `/<arena> duel <player>` command to duel another player. Players must also be granted the `battlearena.command.<arena>.duel` permission.
